Skills / Tools

Proficient Use

HTML/CSS
Javascript (MVC, Node)
MongoDB/Sql
UX Design
UI Development
SourceTree

Intermediate Experience

Sketch
Photoshop
Python (Vanilla, Flask)
Ruby (Vanilla, Rails)
Php (Vanilla, Laravel)
iTerm

Exploring

Swift iOS
Project Management
Dash

Activities

Hackathons

Avid participant in hackathons.

Volunteer/Mentoring

Volunteer/Mentor for CoderDojo NYC.
Mentor of Highschool Hackathons.
I organized and taught a free portfolio website workshop for Rutgers Students.
I led about 20 students in learning front-end programming and design in order to create their own unique portfolio sites.

Education

Rutgers, The State University of New Jersey

B.S. Information Technology and Informatics
Computer Science and Philosophy Minors

Experience

HackNY Fellow 6/14 - 8/14

The HackNY Fellowship Program is a summer long immersion into the New York City tech community. Each fellow works at a NYC startup during the day and attends a lecture series from leaders, engineers, and founders of the community in the evenings. My host startup was cafe.com.

Front-End Engineer 6/13 - 8/13

As a part of Grooveshark's Internship program, I participated in Grooveshark University. The month long class covered front-end basics, server side programming, templating, version control, and more advanced topics like internal tools and backbone.js. After the first month I read a lot of code, explored bugs, and worked on a challenging and fulfilling project.

Web Developer 7/13

TapShield is an emergency service mobile/web application. I added some functionality to their web application interface, Shield Command. During this project I learned about Backbone.js and Parse. I implemented features such as mass alert push notifications, and real time chat with backbone and the parse javascript sdk. I also made a few UI/UX changes.

Freelance Developer 1/13 - 1/14

As a freelancer, I collaborated with some great designers on Wordpress sites, logos, and company branding. During this time I worked for the Rutgers Media Team building websites and applications for student organizations and events using full stack web development technologies. I also launched a game for Rutgers Geek Week.

Mentor Present

Mentoring is something that is very important to me, so I volunteer a portion of my free time to mentoring high-school students, peers, and youth interested in tech. I recently started mentoring for CoderDojo NYC and will be continuing a website workshop I organized for Rutgers students interested in furnishing their online presence.
